*Single-cell TranscriptO*mics
Cell-Cell Interaction ALgorithm

Input

scRNA-seq
transcriptomics

1) Query the LIRICS
database

2) Compute Interaction
Score

$$\text{Interaction Score} = \frac{\text{Cell Type A Receptor Y} * \text{Cell Type B Ligand X}}$$

3) Permutation test
(via shuffling cell type)

4) Accommodate for variations
across samples (optional)

Output

cell-type-specific ligand-
receptor interaction activity

samples

■ Likely to occur
■ Unlikely to occur
